

HC7000

THE BEST FOR CINEMA FANS – PERFECTION DOWN TO THE SMALLEST DETAIL.

Perfect home-cinema viewing depends on the perfect picture, thanks to three key features the HC7000 from Mitsubishi Electric offers just this. Firstly it projects an immaculate image thanks to its full HD resolution and superb contrast of 72,000:1. Secondly, its elegant design and sleek, jet-black pearlescent colouring make the device itself picture perfect. Last but not least, the projector has a fan noise of just 17 dB, which makes it almost silent.

With regard to signal processing and image format, no compromises have been made with the HC7000. The advanced HQV™ technology enables exquisite image processing, even when watching normal DVDs.

HIGHLIGHTS

- Full HD resolution: 1920 x 1080 pixels
- Contrast of 72,000:1 thanks to the newly-developed Diamond Black Iris with an extremely short reaction time
- Practically silent: fan noise of just 17 dB
- Anamorphic settings
- Up to 5000 hours lamp life
